SYNC

TEAM NAME · College

Udyam Express

A small business discovers, buys, verifies and tracks its Accel Business bundle in one sitting: on a phone, in its own language.

Airtel SYNC 2026 · Enterprise Track A: Project Udyam Digital

Platform Partner unstop

93 of every 100 interested businesses are never switched on

Accel's Apr–Jun 2026 data (5,000 SMB leads): the demand exists; the sales journey loses it.

Steepest leak: needs assessed → quote accepted (only 44% pass)

17.6 days
lead → live today

3.0
times each customer chases status

₹15,053
spent to win one customer

9.6% vs 2.0%
activation with vs without GSTIN

48 of 368 activations were sold in breach of catalogue rules (tier, size, GST, dependencies). **Micro retail** is 55% of leads but converts at 4.1% with ₹20k acquisition cost per ₹2.5k/month customer: field sales can't serve it profitably.

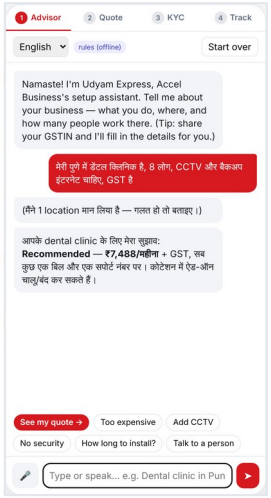

52% of the 4,632 drops are process friction, which a digital journey removes → the feature that fixes each

- **827** no time for / no visit → **Self-serve advisor**
- **385** quote slow or complex → **Instant OneBill**
- **273** paperwork, signatory away → **Smart KYC + e-sign**
- **139** install delay, no fibre → **AirFiber + tracker**
- **805** unreachable after 3 calls → **WhatsApp-first contact**

Built and working: from hello to a verified order in one sitting

Every screen below is the running prototype (phone-first web app; the same API serves WhatsApp and a partner tablet).

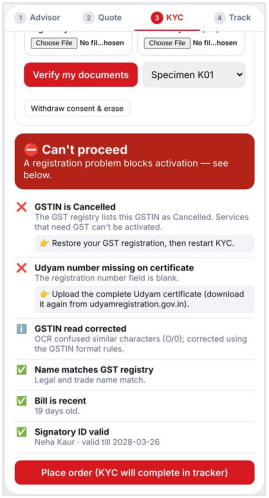

1 · Discover

Chat or speak in Hindi, English or Hinglish (+6 languages via Gemini). One message or a GSTIN fills the profile.

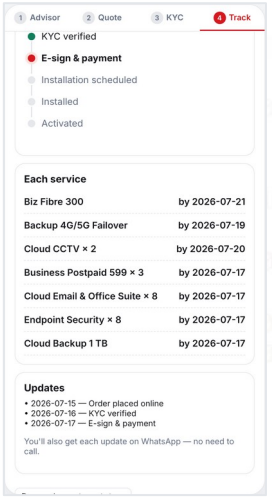

2 · OneBill

Essential / Recommended / Complete on one monthly line. Add-ons toggle and re-price live; blocked items say why.

3 · Verify

Consent first, then OCR on our server + GST/Udyam registry checks: 4 clear verdicts, each with a fix.

4 · Track

Six stages and an ETA per product from install days, with WhatsApp updates instead of chase calls.

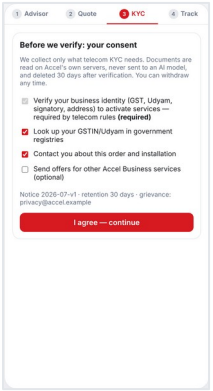

The AI talks, the rules engine decides. Products, eligibility and every ₹ come only from the catalogue; the LLM never sees documents.

Platform Partner unstop

Smart KYC: all 12 specimen applicants judged correctly

On-server OCR (deskew, blur gate, GSTIN repair + checksum) → GST & Udyam registries → name, date and signatory checks.

Applicant	What we found	Verdict
K01	GSTIN cancelled in registry + Udyam number blank	**Rejected**
K07	Legal name edited ('Shri' vs 'Neelgiri Physio Clinic')	**Manual review**
K04	GST certificate blurred (sharpness 1 vs ≥60): no guessing	**Needs action**
K05	Udyam certificate missing: fetch from registry	**Needs action**
K06	GSTIN check digit fails (one digit altered)	**Needs action**
K11	Electricity bill 257 days old (limit 90)	**Needs action**
K02 · K08 · K10	Tilted scan straightened; O/0, I/T, J/I OCR misreads repaired via checksum	**Verified**
K03 · K09 · K12	Clean	**Verified**

4 verdicts, not 2

Verified → e-sign now

Needs action → owner fixes in-app

Manual review → specialist in 4 h

Rejected → registry problem

DPDP Act 2023 by design

- Consent per purpose before upload; hash-chained ledger; 1-tap withdraw & erase
- Documents never sent to an AI model
- Aadhaar / PAN redacted from chat; IDs masked in UI & logs
- Images purged after verdict (≤30 days in prod)

Who first, with what bundle, through which channel

Bundles are the advisor's live output for a typical business (catalogue midpoint, ex-GST). Priority = digital fit × economics.

#	Segment (share of leads)	Today: conversion · median bundle · churn · cost/activation	Recommended bundle (typical business)	₹/month · term	Channel
1	Professional offices (25%) clinic, CA firm, 10 staff	11.1% · ₹6,575 · 13.8% · ₹10.7k 86% have GSTIN → instant KYC	Fibre 300 + 4G/5G failover + 4 business SIMs + email, security & backup for 10	₹8,213 · 12 mo	Self-serve web/voice
2	Micro retail (55%) kirana, salon, pharmacy	4.1% · ₹2,470 · 22.7% · ₹20.0k very price-sensitive	Fibre 100 (AirFiber if no fibre) + UPI billing tablet + 2 SIMs; Essential from ₹1,848	₹2,546 · 12 mo	WhatsApp + partner-assisted
3	Multi-site (15%) restaurant chain, 5 outlets	11.0% · ₹28,080 · 10.8% · ₹15.6k	Fibre 300 + failover + POS per outlet, 20 cloud CCTV, 10 SIMs, one bill; SD-WAN in Complete	₹26,705 · 24 mo	Advisor qualifies → field rep
4	Manufacturers (5%) auto-parts unit, 45 staff	12.8% · ₹15,910 · 8.1% · ₹15.3k	20 Mbps leased line (99.5% SLA) + 8 machine-monitoring IoT kits + SIMs, email & security	₹26,444 · 24 mo	Field sales + site survey

Field force & partners: the digital journey feeds them, it doesn't replace them

Partners get warm leads
Chats the bot can't close (tier-3 towns, >10 sites, custom needs) arrive with the chat summary, ranked by win-back score; commission on close.

Assisted mode
Same app on a partner's tablet for owners who prefer a person: KYC done on the spot, partner credited.

Reps focus on big tickets
Multi-site and factories (fastest payback) go to field sales pre-qualified; reps keep credit for advisor-sourced deals.

Five metrics, conservative targets: the 5,000 leads replayed

Each drop reason is won back only by the feature that removes it, at cautious 10–40% rates (code: app/backoffice.py · impact()).

Metric that matters	Today	Replayed	Pilot target
Lead → activation	7.36%	13.0%	≥ 12%
Days lead → live	17.6	7.3	≤ 8
Cost per activation	₹15,053	₹8,447	≤ ₹9,000
Status chase calls / customer	3.0	tracker	≤ 1.0
6-month churn	15.2%	—	≤ 12%

Why these are reachable: quote, KYC and e-sign happen in one sitting, so only install time is left (AirFiber 2 days, fibre 5, leased line 21). In the data churn rises with chase calls (1 call → 5.9%, 5 calls → 27.9%); the tracker removes the calls.

Extra activations per quarter, by feature

+283
activations a quarter (1.8×)

≈ ₹9.4 Cr
added ARR run-rate after year 1

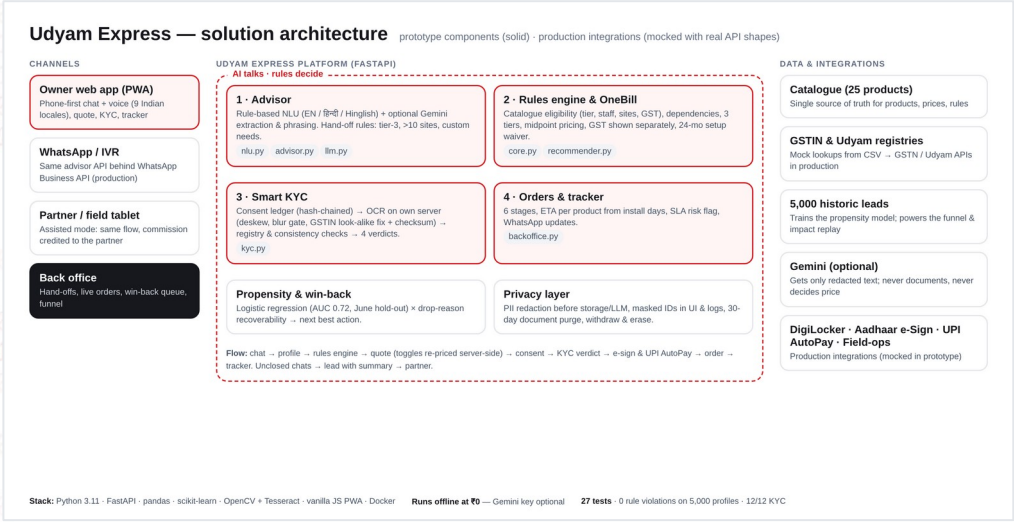

48 → 0
rule-breaking sales

₹9.4 Cr = 283 × 4 quarters × ₹6,900 median bundle × 12 months. Cost model: −30% field effort on self-served sources, +₹40/lead platform cost (AI, OCR, hosting).

Built to ship: architecture, evidence, rollout and risks

Runs offline at ₹0 (Gemini optional); registries, DigiLocker, e-Sign and UPI AutoPay sit behind production-shaped interfaces.

Phase	Rollout plan
Weeks 0–8	Pilot: professional offices in Pune, Delhi, Jaipur, Kochi; web + WhatsApp; 20 partners
Weeks 9–16	Micro retail via WhatsApp + partner-assisted mode; 6 more Indian languages live
Months 5–12	All tier-1/2 cities; multi-site and factories qualified by advisor for field sales

Risk	Mitigation
Install capacity	Launch gated on crews; AirFiber (2 days) absorbs fibre backlog; SLA alerts
Channel conflict	Partners get leads + commission; reps keep credit
Wrong advice / AI error	LLM can't set products or prices; numbers checked; hand-off rules
KYC fraud	Registry + checksum + edit detection → manual review queue

Evidence (run pytest / tests/bench_public.py)

27
automated tests

0
rule breaks across 5,000 profiles × 3 tiers

12/12
KYC specimen verdicts

75%
of 268 unseen scenarios written by other teams

0.72
AUC lead score, June hold-out (2.2× lift)
